

# ***FIXED WIRELESS ACCESS: FAST, FLEXIBLE INTERNET***

## **What is FWA (Fixed Wireless Access)?**

FWA delivers high-speed internet using wireless signals - often 4G or 5G - to sites where fiber rollout is slow, costly, or impractical. It's ideal for locations needing rapid startup and deployment. FWA offers flexible, reliable connectivity and plays an important role in business continuity strategies by providing an alternative or backup internet path without the long lead times of wired infrastructure.

## **Why FWA with Expereo?**

Expereo strategically integrates FWA into your overall connectivity plan to design the right mix for your business's needs and locations. We manage everything end-to-end, from supplier selection through hardware deployment and setup and ongoing management, ensuring FWA enhances your network's agility and resilience.

## **How does FWA address the key business challenges?**

### **Outdated Infrastructure**

Supports fast deployment and business continuity by providing connectivity when wired options aren't feasible or have long lead times.

### **Complexity & Cost Management**

Accelerates site connectivity by reducing waiting times for new connections, while Expereo manages the full lifecycle under one strategic partner.

### **Downtime Risk**

Offers a resilient, diverse failover option that helps maintain uptime and protect workflows during primary network interruptions.
